

Dry Fire Trigger Control Target

For assessing and improving trigger control,
optimal grip, optimal speed, and
finger position on the trigger.

Using a safe backstop, remove all ammo from the training area. With an always-on laser (laser sight, bore sight, or laser pointer) attached to your pistol, hold it at chest level pointed at the target. Aim the laser at the crosshairs, and do a dry fire rep. Pay attention to how much the laser moves while you're pressing the trigger. Adjust your grip, speed, and finger position as you're pressing the trigger until you find the combination that gives you the most control.
